Dear Mike

Re: Flying Fox

Thank you for the loan of your demonstration Flying Fox unit.

We have extensively trialled the unit at many of our more difficult sites and found the set up to meet our requirements. It complements the use of our acoustic instruments, at sites where there is no slackline or bridge structure to tether the equipment to. In these situations we have been successfully spanning distances of +65m. This piece of equipment for our river situations and conditions is excellent, enabling us to capture flows that have previously been very difficult to gauge, not to mention that it takes people out of the river, giving huge safety benefits.

I would recommend the Flying Fox as an essential tool in the field hydrologist toolbox. What a great piece of equipment!

Yours sincerely

Dion Ayers
Senior Hydrological Field Officer
